

**Single Phase Connections**

Single Phase Power is the typical power installed in homes. There are however a number of different sized connections that can be installed in the home. A normal power point is only 10amps. Most of our Kilns require larger connections similar to the connection for an Air Conditioner, Water Heater or Kitchen Oven. Below is a listing of size connection and kiln models. We recommend talking with your Electrician about having the appropriate connection installed. We are also happy to answer any of your Electrician's question directly if they contact us.
