Woodrow Kilns – Producing Beautiful Ceramics and Pottery for over 40 years

## Electrical Connections & Plugs Explained

### Single Phase 10A

**Single Phase Power** – Refers to the standard type of power that connects to a home. Normal Power Points are 10A. Homes can also run 15A or 20A plugs. These are used for Air Conditioners, Spas or Kilns. They normally require a new circuit to be run from the supply box.

### Single Phase 15A

**Two Phase Power** – Requires industrial type three phase power but only runs on two of the available phases.

### Single Phase 20A

**Three Phase Power** – Industrial type power only available in certain areas and can be expensive to have installed into a home.

### Two Phase & Three Phase Plugs
